Interface Technology

in Modular Housings

Interface Technology in Modular Housings – IM Series

Functions and selection guide

The housing concept

Depending on the device's scope of functions, there are housings with a width of 18 or 27 mm, while they are 104 mm high. All modules may be mounted directly next to each other and can be powered via the power bus.

Universal power supply

With a universal power supply ranging from 20...250 VUC, or 20...250 VAC/20...125 VDC for the intrinsically safe versions, the new IM-modules may be connected to practically all industrial power networks. The universal power supply facilitates device selection, as well as device and spare parts inventory management.

Removable terminal blocks

Removable terminal blocks simplify installation and device replacements significantly. The terminals are coded, thus preventing interchange errors.

ATEX compliance

All interface devices of the IM series feature intrinsically safe input and output circuits and are approved according to the new framework directive 94/9/EC, regarding equipment and protective systems intended for use in potentially explosive atmospheres. They can thus be used as associated equipment.

The blue terminals are designated for connection of intrinsically safe signals.

Further information on the ATEX directive is available via the Internet: <http://ec.europa.eu/enterprise/atex/guide/index.htm>

**Isolating amplifiers**

Processing of switching states of mechanical contacts and sensors according to EN 60947-5-6 (NAMUR).

(Page 4)

**Isolating transducers**

Supply and transmission of current signals of 2-wire transmitters located in explosion hazardous areas. HART® devices enable bi-directional communication. This range incorporates devices with and without auxiliary power and active or passive outputs. Series-FSD includes smoke and fire detectors.

Rotational speed monitors/Frequency-current converters

Rotation speed monitoring for overspeed/underspeed and window function, operating range between 0.06...600000/min

(Page 5)

**Temperature measuring amplifiers**

Linear conversion of temperature values into standard current signals. Linear conversion of temperature values, which are detected by a thermo-element, into standard current signals. All customary thermo-elements or mV-signals may be connected. Types -Ci, -CRi = programmable via PC using software PACTware™.

Analog data transmitters/intrinsically safe input isolators

Galvanic isolation and/or conversion of analog current and voltage signals. There are devices with intrinsically safe input and output circuits.

(Page 6)

(Page 7)

**Potentiometer amplifiers**

Conversion of the variable resistance values of a potentiometer into standard current and voltage signals. The input circuit is intrinsically safe, so that the potentiometer may be mounted in the explosion hazardous area.

(Page 8)

**Limit value monitors**

Monitoring of standard current and voltage signals relative to preset limit values. This series includes devices with three limit values and versions with current output. Types -SR, -SRI feature a manual teach function, whereas types -R and -RI are adjustable via a coded rotary switch.

(Page 9)

**Valve control modules**

Intrinsically safe supply of magnetic valves, pilot indicators, transmitters etc.

(Page 10)

**Coupling devices**

Galvanically isolated transmission of binary switching states. These devices function as a reliable interface between different potentials.

(Page 11)

**Power supplies**

Power supply with galvanic isolation used to power low power consumers, particularly suited for powering the switching and monitoring devices of Turck's interfacemodul, multimodul und multisafe® series.

(Page 12)

(Page 13)

**Programming adapter**

For programming the IM-modules via a PC.

(Page 14)

**Power-bus for power distribution**

Distribution of the power supply to several modules „xx“ in the type code stands for the number of modules „03“ for 3-pole terminals.

Cage-clamp terminals

Removable cage-clamp terminals (3/5-pole) for IM modules.
